

XMMC

Xecure Messaging Centre

“Mobile usage in businesses today is soaring as they increasingly turn to the mobile phone to get their message across to their customers anywhere and at any time.”

Governmental organizations are not far behind either with SMS broadcasting having been used from anything from terror alerts to disaster notification and viable rescue around the world. However, there are limitations.

The ability to repudiate and trust the message's source is lacking in normal SMSes and, when given in the circumstances of such broadcasting activities, can lead to tragic and expensive consequences – as was the case, for example, when a false SMS tsunami emergency warning broadcast in the wake of the disaster caused thousands to flee, resulting in the deaths of four people.

XMS Message Centre is a separately licensed software that is intended for use by designated end users who would like to extend mobile to mobile communication to a desktop / laptop while maintaining a high level of security and trust.

Features:

INTERNAL COMMUNICATIONS

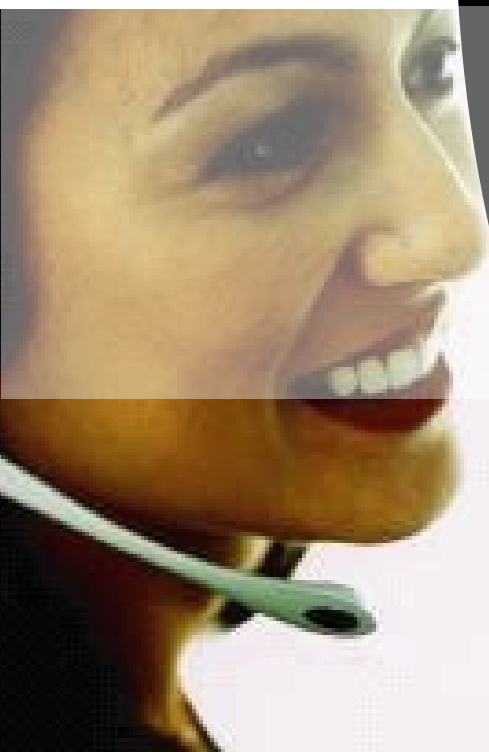

Enable Bulk message notification to employees.

COMPANY AND CLIENT COMMUNICATION

Establishing relationships both ways for marketing or product information.

EMERGENCY NOTIFICATION

Provide a trusted line of communication in the event of an emergency or disaster

Corporate Office: NSS MSC Sdn. Bhd.

Suite E-07-21, Plaza Mont' Kiara
2 Jalan Kiara, Mont' Kiara
50480 Kuala Lumpur
Malaysia

fax: +603 6203 5302

E-mail: sales@mynetsec.com

Benefits:

PRIVACY AND SECURITY

Encryption and safety features provide for secure communication and message privacy.

DIGITAL SIGNATURE FOR TRUST

Enable verifiable trust in the source of the message.

XMS BROADCAST

Allows your XMS messages to be broadcasted to XMS Mobile users across any mobile networks internationally.

EXTENSION OF MOBILE COMMUNICATIONS

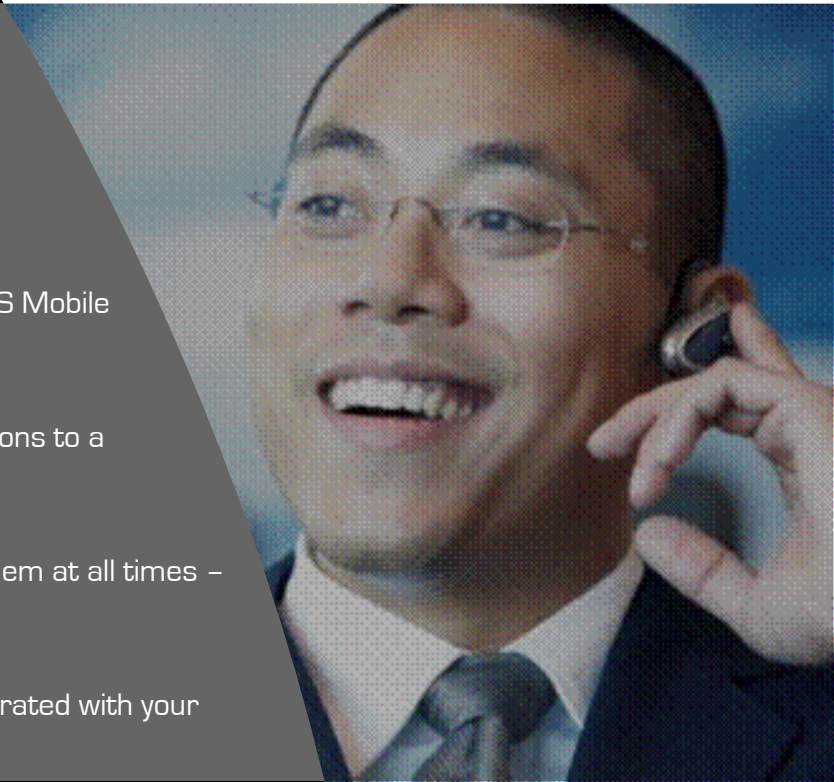

TMCC extends current mobile to mobile communications to a desktop / laptop.

COST EFFECTIVE

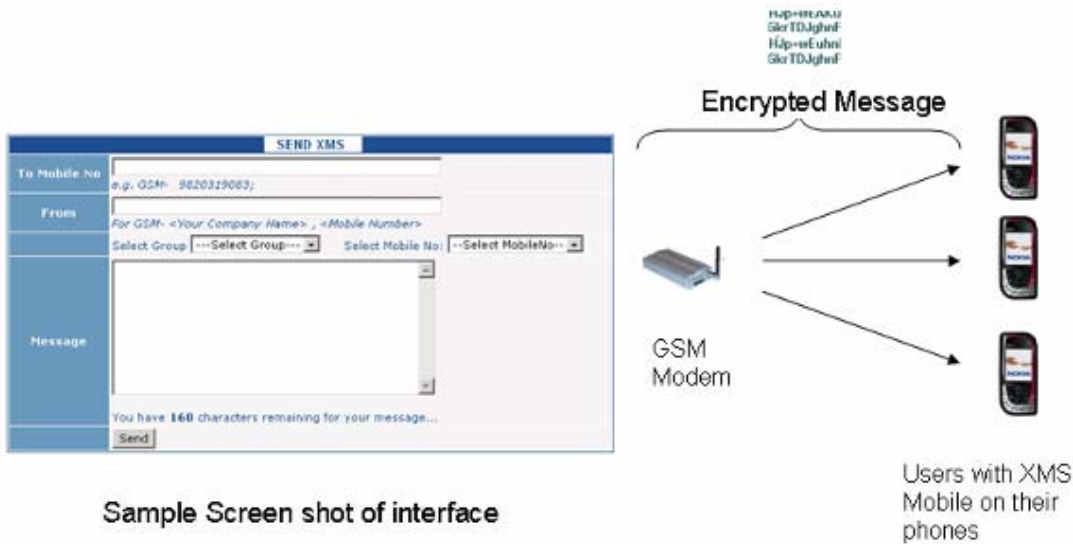

The vast majority of people have a mobile phone on them at all times – reach them all at the cost of a normal SMS.

ZERO INFRASTRUCTURE COST

A GSM modem is bundled with the package and integrated with your existing server.
